About Project

Project Description

This project is developed using Machine Learning and Streamlit.

The main goal of this project is to predict student performance based on reading and writing scores.

Technologies Used

- Python
- Pandas
- Matplotlib
- Seaborn
- Scikit-learn
- Streamlit

Algorithm Used

Random Forest Classifier

Project Workflow

1. Data Collection
2. Data Preprocessing
3. Data Visualization
4. Model Training
5. Prediction
6. Frontend Development

Project Objective

To build an AI-based application for predicting student academic performance.
